Hotels
& hospitality

Beautiful water. Luxury experience.

Make the essential exceptional with beautiful water.

Water is the universal language of hospitality. From providing water in hotel suites, to drinking water on demand in reception, the simple act of offering this essential is a long standing welcoming tradition, signifying care and attention of guests' needs.

From sustainable suites to luxurious lobbies, providing guests with high quality drinking water, not only enhances guests' comfort but demonstrates that their every need will be taken care of, ensuring a more enjoyable stay.

Traditionally, bottled water has been a staple of hospitality, but at Borg & Overström, we understand the ever increasing importance of providing sustainable water within hotels and hospitality environments.

Utilising the latest technology, our beautifully designed water solutions ensure guests can enjoy great tasting, freshly-filtered, chilled and sparkling water without the need for endless bottles and waste. A great stay, starts with great water.

Beautifully designed, sustainable water for guest satisfaction.

The difference is in the details.

The balance between providing elevated experiences and home comforts is an art, where luxurious, inspiring interiors are combined with exceptional amenities.

With elegantly crafted aesthetics and minimalistic, sophisticated profiles, Borg & Overström dispensers are diligently designed to seamlessly integrate with any interior style and elevate the simple act of drinking water into a beautiful experience.

Inspired by Scandinavian design and built by hand in England, we carefully combine quality materials with advanced technologies to deliver impeccable form and functionality in every drop.

Great tasting, premium drinking water without the bottle.

Excellence in every pour.

At Borg & Overström we believe the difference is in the detail, from having sparkling water on tap for guests to enjoy, to providing instant access to hot water within hotel rooms. Whether you are after that comforting cup of tea after a long day of travel, or that crisp, cold glass of water for the night stand to aid a restful nights sleep, our advanced water dispensing solutions will cater for all tastes and desires.

For a truly sustainably superior stay, it is time to remove the single-use plastic bottles and open up a world of possibility with freshly-filtered water, designed for even the most demanding guests.

Upgrade every guest
experience, simply
with better water.

Better water from breakfast to nightstand.

Self-service water, diligently designed for every environment.

Good quality water is an essential, required across the full spectrum of hospitality environments. From a T3 delivering piping hot water at the breakfast bar to sparkling water at the cocktail bar, the versatility of on tap, temperature controlled water provides the ultimate convenience.

Replacing plastic bottles on nightstands with in suite 4-in-1 taps or communal corridor dispensers, the Borg & Overström range offers a unique solution to drinking water, whilst removing the

need for unsightly kettles or the endless restocking of bottled water.

With travel awards requiring hygienic touchless dispense for high-tech fitness suites and spa facilities, the award winning SensorBeam® technology provides a futuristic answer for touchless self-service water. In communal areas such as lobbies and conference suites where luxury amenities are paramount, an E7 Corian® topped dispenser is a unique way to provide bottle-free drinking water.

From an essential into an experience.

Curate a guest experience to build your brand.

Guests today are looking to elevate their everyday to an experience for a truly memorable stay. Water is an everyday essential that can be simply elevated into an exceptional drinking experience.

Renowned for unique premium aesthetics and exquisite materials, each of our drinking water systems are designed for the discerning eye. Built with durability in mind, we believe that functionality can be beautiful, and that great design makes for enjoyable experiences.

Creating refill points provides opportunities to interact with guests and visitors, by encouraging a moment of refreshment and relaxation. Brands can further enhance this moment with the provision of branded bottles and drinking vessels, for guests to take with them on their travels.

Statement, re-fillable bottles are quickly becoming a marque of the well travelled, indicating their values, where they have stayed and their stance on sustainability.

Sustainability is here to stay.

Bottled water has long been the staple of the hospitality industry, providing convenient access to water for guests. From bottles placed on nightstands, to stocked mini-bars and conference tables adorned with bottles of sparkling water, every instance creates waste, and needs to be replenished once used, over and over again.

With consumers driving sustainable travel trends, and travel awards setting sustainability targets, businesses are looking to stand out with their own green credentials. By implementing point of use, self-service water solutions and switching from bottled water, companies can make a significant contribution towards

meeting ESG goals and obtaining eco-tourism recognition.

From EcoMode energy-saving technology, reducing energy running costs by up to 70%, to eliminating the waste of millions of single use water bottles used by hotels each year, Borg & Overström dispensers provide an all round, sustainably superior solution, without any sacrifice to water taste or quality.

When sustainability translates into significant savings across cost, time and carbon footprint, being an environmentally conscious business can be as easy as simply changing the way you provide water.

Bottleless, locally sourced water, filtered for freshness, chilled for convenience.

Excellence in every pour.

Premium water without the plastic.

Simply better water keeps our beaches beautiful.

The sad truth is that a simple sip of bottled water on one vacation could be contributing to the destruction of a vacation spot elsewhere on the planet.

An average hotel will consume on average between 50,000 to 100,000 bottles a year, depending on size and occupancy. Every single one of these will end up as waste, often ending up in landfill or littering beaches and river banks. Only about 30% of single-use bottles make it to recycling.

Plastic waste contributes to microplastics, which are found in our water sources and oceans. Recent studies have found 90% of bottled water samples contained harmful microplastics.

A single Borg & Overström point of use dispenser will eliminate around 35,000 single-use plastic bottles in its lifetime. Locally sourced water is freshly-chilled and filtered to remove particles, microplastics and contaminants, for great tasting water without the plastic.

Significant savings with green technology.

Chilled water which is better for the planet, better for your running costs.

Every single bottle of water used by a hotel will need to be ordered, delivered, stored, refrigerated and replenished. For an average hotel this equals an estimated 160 working days spent on restocking water. The cost of this labour is estimated at around £15,000, before any bottled water has even been purchased. The average hotel will spend £15,000 on bottled water annually.

Installing a dispenser, eliminates this ongoing cost expenditure, of around £30,000 a year, before you even

bring into consideration the substantial cost savings to be gained from built-in energy-efficient technology.

EcoMode intelligent energy-saving technology ensures water is only chilled when someone is around to enjoy it. Bottled water needs refrigeration which runs continuously. A dispenser is energy efficient compared to a fridge or kettle. EcoMode will save around 70% on energy costs, compared to chilling bottled water by refrigeration.

Give back with every glass.

At Borg & Overström, we believe everyone should have access to clean drinking water, no matter where you are in the world. As partners of the Made Blue Foundation, we give you an opportunity to give back with every glass, providing clean water for those in need.

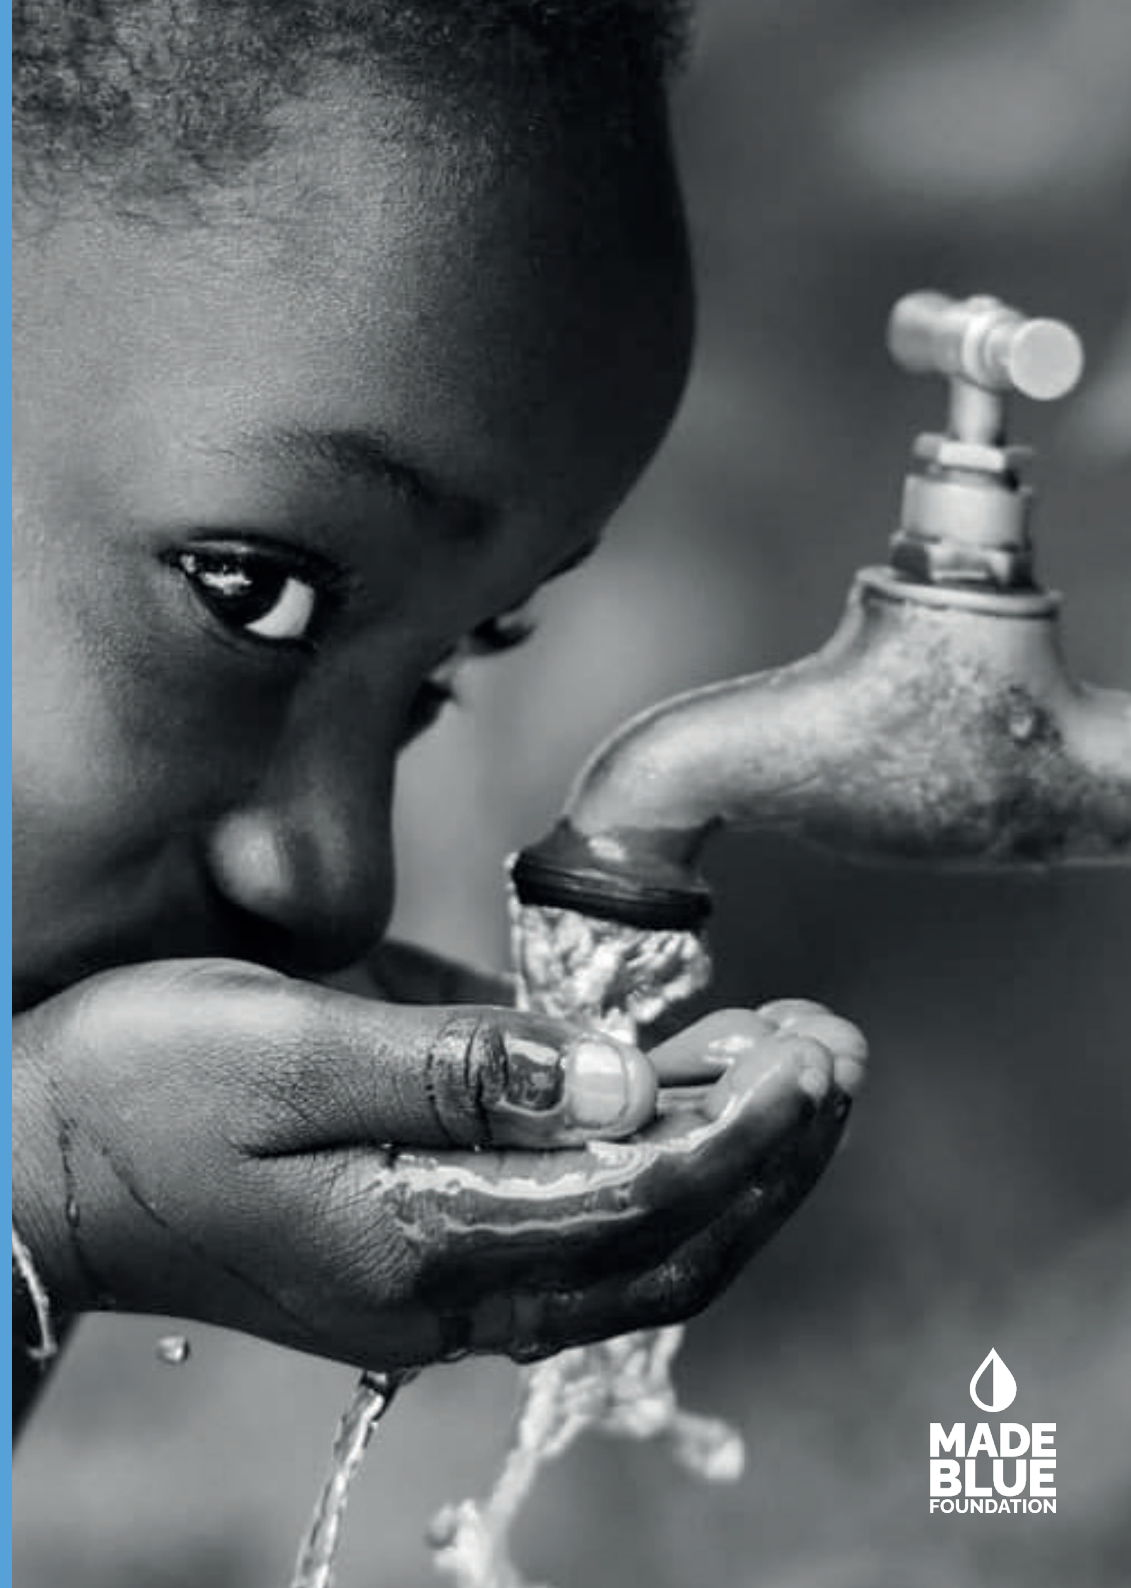

Made Blue is an entrepreneurial charity who work with hotels and businesses to reduce water poverty. Made Blue invest in projects which provide infrastructure to deliver clean water to communities in need. Together Borg & Overström and Made Blue have provided over 13 million litres of clean drinking water.

Great hotels provide great water.

Find us online at borgandoverstrom.com

For less than the cost of a cup of coffee, you can donate to ensure every glass of water poured from a Borg & Overström dispenser is matched with a glass of clean water for someone elsewhere in the world. Your guests will never drink alone.

Only 1 in 10 people have access to clean drinking water, and with a simple donation you can help make a difference. Made Blue work with hotels to enable them to save and serve water in the most impactful way.

Just add water...

It really is as simple as just adding water. Easily place a floorstanding dispenser in any communal area or enhance your tea points with a digital tap system. The T3 tap with instant hot water is ideal for pouring the perfect cup of tea, using less energy, and taking up less counter space than a kettle. An E6 with Measured Dispense, allows for efficient hands-free filling, time and time again.

- ✓ Easy installation and maintenance
- ✓ Touchless hygienic technology
- ✓ Measured Dispense portion control
- ✓ Carbon filtration
- ✓ Viovandf® purification protection
- ✓ Energy-saving EcoMode
