Introducing the T3
to Heidelberg, London,
with Vending Sense.

HEIDELBERG

Objective

Leading printer manufacturer Heidelberg was searching for a straightforward solution to replace their faulty office hot taps, which had been frequently breaking down. They needed a solution that could seamlessly cover the existing cutouts in their worktops, avoiding the need for costly worktop replacements. Additionally, Heidelberg sought a solution that included sparkling water, as they were incurring high costs from purchasing bottled sparkling water. Renowned for their leading technology and commitment to quality, Heidelberg was impressed by Borg & Overström's premium product range and cutting edge technology, as demonstrated on their virtual showroom tour with Vending Sense.

Solution

Vending Sense provided Heidelberg with a dispenser suited to their requirements—the T3 MonoFit® integrated tap system. Manufactured in the UK with an elegant profile, the tap makes a wonderful addition to their beautifully designed offices, providing staff with great tasting, freshly-filtered hot and cold water. Featuring a unique retrofit plate, the T3 MonoFit® 4-in-1 tap provides a simple solution for upgrading previous integrated tap installations. The new T3 taps were installed quickly and seamlessly over the pre-existing cutouts in Heidelberg's countertops, providing an efficient and fuss-free upgrade, with an immaculate finish. With DeepSparkle® sparkling water now instantly chilled and on tap, Heidelberg are now able to easily refill carafes and glasses for guests in an instant. This cost saving convenience ensures they can offer great hospitality for their customers.

Feedback

"The T3 MonoFit® tap has been a fantastic and welcome addition to our office. Now, with limitless access to fresh filtered water, employees can easily grab a chilled glass of sparkling water or make a cup of tea. The amount of sparkling water bottles we used to have to purchase for staff and visitors more than outweighs the initial cost of the T3 units. We needed a tap that would fit seamlessly over the existing holes left by our previous tap, and the T3 MonoFit® was the perfect solution."

Graeme Wilcockson, Heidelberg.
